ASHTABULA COUNTY COMMUNITY CONSULTATION OFFICERS (CCO) MEETING
December 6, 2017
TODAY’S AGENDA

The Value of Updated Flood Maps for Your Community
Reviewing the Updated Flood Risk Data for Your County
Next Steps in the Map Adoption Process
Understanding Flood Insurance
Hazard Mitigation
FEMA is here today to:

- Present Ashtabula County’s new flood maps
- Help you assess your community’s flood risk
- Explain how the maps inform risk assessment and the National Flood Insurance Program (NFIP)
- Review your role in the next steps of this mapping process
- Answer your questions
The National Flood Insurance Program, or NFIP, balances three related areas that must support each other.
The Status of this Study

Last Time We Met

1. Floodplain Management Workshop
2. FIRM Production
3. Preliminary FIRM

Now We Are Here

1. Community Coordination Meeting and Open House
2. Comment and Appeal Periods
3. Letter of Final Determination
4. Effective FIRM

- Lake-Wide Storm Surge and Waves Study
- County Based Overland Analyses
- Workmap Production
- Flood Risk Review Meeting
- Comment Period
The Value of Updated Flood Maps for Your Community
Flood Maps are Used to Make Important Decisions

- To Identify and Assess Flood Risk
- To Establish Rates for Flood Insurance
- To Guide Local Land Use Decisions
- To Inform Engineers and Developers
- To Prepare Emergency Managers

FEMA
RiskMAP
Increasing Resilience Together
Why is FEMA Updating this Community’s Flood Maps?

The Great Lakes Coastal Flood Study provides updated flood risk information across each of the Great Lakes, including Lake Erie, using uniform methodology, updated terrain data, and modern wave modeling techniques.

Many factors contribute to flood risk changes over time:

- Population growth & increased development
- Movement in rivers & coastline
- Changing weather patterns & updated rainfall data
Your Role in this Process

As Local Officials, Floodplain Administrators, and Staff you can:

- Provide technical review of preliminary data
- Submit questions and comments to FEMA
- Share new flood risk information with property owners and stakeholders
- Identify mitigation needs and priorities
- Update local plans, codes, and ordinances
Reviewing the Updated Flood Risk Data for Your County
The Great Lakes Coastal Flood Study Approach

Regional Study Approach

- Water level and wave analysis
  - 155 storms from 1960-2009
- Greater consistency in assumptions
- Reduces number of boundary conditions

Local/County Level Activities

- Mapping level tasks performed at county level
- Nearshore wave transformations
- Erosion
- Wave runup
- Overland wave propagation
The Great Lakes Coastal Flood Study in Ashtabula County

- **33 miles of coastline**
  - Coastal Hazard Analysis
    - 32 Coastal Transects
  - Riverine-Coastal Special Flood Hazard Area integration
  - Topography
    - 2012 U.S. Army Corp of Engineers Lake Erie LiDAR
    - 2006 Ashtabula County Ohio Statewide Imagery Program (OSIP) LiDAR
Great Lakes Water Levels

Lake Level (ft, LWD)

Year

Pre-2010
Post-2009
Measuring Coastal Base Flood Elevation

SWEL = Stillwater Elevation (storm surge level)
Total SWEL = Stillwater Elevation, inclusive of wave setup
Runup Mapping

Wave runup depth $\geq$ 3 feet

100-year stillwater elevation

100-year wave runup elevation = BFE

100-year wave crest elevation

Inland extent of wave runup

Datum (e.g., NGVD, NAVD)
Wave Runup Mapping

- Wave runup is very sensitive to shoreline characteristics
- Single Base Flood Elevation (BFE)
- Gutters perpendicular to the shore divide the BFES
- Transitional zones capture changes in shoreline characteristics between transects
- Wave runup mapping may have associated overtopping or AO zones
Wave Overtopping: Zone AO

- Overtopping rate considerations for establishing flood insurance rate zones

  - Sheet Flow Considerations
    - Areas where AE not present beyond slope break
    - Duration of overtopping
    - Rainfall associated with event
    - Topography
    - Drainage landward of the overtopped barrier
LiMWA: Limit of Moderate Wave Action
Special Flood Hazard Area (SFHA) Zones

- **Zone VE**
  - Coastal high-hazard zone areas where wave action and/or high-velocity water can cause structural damage during the 1-percent-annual-chance flood
  - Wave heights > 3ft
  - Subdivided into elevation zones & BFEs are assigned

- **Zone AE**
  - Applied in areas subject to inundation by the 1-percent-annual-chance flood
  - Wave heights < 3ft
  - Subdivided into elevation zones & BFEs are assigned

- **Zone AO**
  - Applied in areas of sheet-flow & shallow flooding
Limits of Coastal Flood Effects from Lake Erie are shown on FIRM (white line) and in the Flood Insurance Study (in Table 24: Floodway Data and in Flood Profiles)
Scope of Work: Riverine-Coastal SFHA Integration

* Controlled by coastal flooding — see Flood Insurance Rate Map for regulatory base flood elevation
Scope of Work: Riverine-Coastal SFHA Integration

- **Detailed Zone AE**
  - Ashtabula River 01P
  - Conneaut Creek 08P
  - Cowles Creek 10P
  - Unnamed Stream No. 2 29P

- **Approximate Zone A**
  - Wheeler Creek

*No Profile/FWDT updates, only at confluence with Lake Erie*
What are “Changes Since Last FIRM” in Ashtabula County?

The “Changes Since Last FIRM” (CSLF) product compares the Effective Flood Insurance Rate Maps (FIRMs) to the new Preliminary FIRMs in GIS format.

In Ashtabula County, as in all counties along the Great Lakes:

- Coastal VE Zone replaced Effective Zone AE
  - Coastal High Hazard (Wave heights > 3ft)
- New Coastal AE Zones
  - Inland (behind shoreline) (Wave heights < 3ft)
- New Coastal AO Zones
  - Shallow Ponding Depths 1-3ft
- Riverine AE & A Zones were integrated
  - Coastal Stillwater Backwater Elevations were remapped, where applicable
Changes Since Last FIRM in Ashtabula County

Ashtabula County Ohio Coastal Update

National Flood Insurance Program

FEMA

RiskMAP

Increasing Resilience Together
Summary of Ashtabula County’s Letter of Map Changes (LOMCs)

All LOMCs were addressed in the preliminary Summary of Map Actions (SOMA) and placed into one of four categories:

1. Incorporated
2. Not Incorporated (validated)
   - LOMCs on Revised Panels
   - LOMCs on Unrevised Panels
3. Superseded
4. To be Re-determined

Be sure to review the prelim SOMA for completeness

If you note a LOMC missing from the list, submit the omission with your comments
NOTE: Format Changes to the FIRM
NOTE: Format Changes to the Flood Insurance Study (FIS)

FIRM Index integrated into the FIS

- Simplified significantly
  - FIRM Panel Index, Political Areas, & Watershed Boundaries
  - Panel dates/Panel-Not-Printed notes kept on Index
- 11x17 fold-out
- Map repositories and community dates are moved into FIS tables

Other additions to FIS:

- Summary Tables added
  - Hydrologic and Hydraulic Analysis
- FIRM “Map Legend” added to FIS
- FIRM “Notes to Users” moved to FIS
Next Steps in the Map Adoption Process
Timeline for Ashtabula County

- **Flood Risk Review Meetings**: 8/2/2016
- **Floodplain Management Workshop**: Summer 2017
- **Preliminary Map Issued**: 9/29/2017
- **CCO and Public Open House Meetings**: December 6, 2017
- **90-Day Appeal Period**: TBD
- **End of 90-Day Appeal Period**: TBD
- **FEMA Issues Letter of Final Determination**: TBD
- **Effective Date**: TBD
4-Step Pre-Adoption Process

1. Inform the Community
2. Gather Comments and Additional Data
3. Appeal Process
4. LFD Issued
#1: Inform the Community – Open House

- Notifications to the Public
- Property Identification Mapping Assistance
- Comment Sheets Collected for Review
- Attendees Notified as Process Moves Forward
#2: Gather Community Comments

- Comment forms are available at the Open House
- Homeowners submit their comments to local community officials
- Local community officials forward comments to FEMA Region V Service Center
#3: Appeal Process

- **Appeal Period is 90 days**
- **Publication of Notice in Federal Register**
  - Notification to communities by letter including two local newspaper publications
- **All are welcome to submit information**
  - FEMA recommends directing comments through local community officials to provide a consolidated picture
- **Appeals should be submitted to STARR II or FEMA Region V**
  - Additional instructions will be provided to Community CEO
- **FEMA will evaluate all appeals and comments for resolution after the Appeal Period**
The Appeals Period: Appeals vs. Comments

To be considered an appeal, a submittal must:

- Include data that shows the proposed flood hazard information (e.g. new or modified Special Flood Hazard Area zones or boundaries, Base Flood Elevations, base flood depths, and/or floodway boundaries) is scientifically or technically incorrect;
- Include the necessary revisions to the FIRM and/or FIS report (e.g. boundaries of revised floodplains);
- Be received during the statutory 90-day appeal period

The term comment is used for any submittal that does not meet the requirements for an appeal as outlined above
#4: Issuing the Letter of Final Determination

**Flood Risk Review Meetings**
- 8/2/2016

**Preliminary Map Issued**
- 9/29/2017

**CCO and Public Open House Meetings**
- December 6, 2017

**End of 90-Day Appeal Period**
- TBD

**FEMA Issues Letter of Final Determination**

**Effective Date**
- TBD
Understanding Floodplain Management Ordinance Requirements
Participation in the National Flood Insurance Program

- NFIP is a voluntary program.
- Participation requires that communities adopt and enforce floodplain management regulations in the form of a community ordinance.
- At a minimum, the floodplain management regulations need to be based on the risk data provided by FEMA (the FIRM and FIS).
- Participation in the NFIP makes flood insurance available to the residents and businesses within your communities.
- Flood insurance is a requirement for federal loans (insured or otherwise) or other federal financial assistance to purchase, repair, improve or rehabilitate buildings within the SFHA.
- Many forms of disaster assistance are either a type of federal loan or other federal financial assistance.
Ordinance Adoption During Map Updates

- **Timeline Prior to Effective Date:**
  - 6 months prior: FEMA 6-month LFD Letter
  - 4 months prior: Draft Ordinance (suggested)
  - 3 months prior: FEMA 90-day Reminder Letter
  - 1 month prior: FEMA 30-day Reminder Letter

- Ordinance needs to be compliant prior to effective date of FIRM & FIS (or community may be suspended from NFIP)
Where to Find Minimum NFIP Requirements

- NFIP Minimum Floodplain Management Standards are found in Part 60 of Title 44, Code of Federal Regulations
- Coastal specific standards are found in Part 60.3(e)
- FEMA establishes the minimum requirements; however, states and local communities are encouraged to adopt more restrictive standards to better address their flood risk. When these higher standards are in place, they take precedent over the minimums.
A Zones

- Fill outside the floodway or which can be shown to not cause a rise to the BFE allowed.
- Fully-enclosed foundation wall (flood openings required) construction allowed.
- Lowest floor elevated to or above the base flood elevation (BFE).
- As-built lowest floor elevation required to be on file with permit records.

V Zones

- Fill not allowed for structural support of buildings.
- Open foundation on columns or piles free of obstructions or designed with break away walls.
- Bottom of lowest horizontal structural member to or above BFE.
- Professional Engineer or Architect shall certify the design, including wind loading, of the structure and be on file with the permit records.
LiMWA (Limit of Moderate Wave Action) on the Map

- At present, not a regulatory requirement
- Community Rating System (CRS) benefit for communities requiring VE Zone construction standards in areas defined by LiMWA or areas subject to waves greater than 1.5 feet
- Building codes may require construction to VE Zone standards when in a LiMWA
Understanding Flood Insurance
Flood Insurance Basic Concepts

- Structures built on or before December 31, 1974, or before the effective date of the initial FIRM of the community, whichever is later.

- Structures built after December 31, 1974, or on or after the effective date of the initial FIRM of the community, whichever is later.
Flood Insurance Basic Concepts

- **Pre-FIRM (subsidized) rates**
  - For structures built before the first maps of the community
  - Do not reflect the structure’s true risk negatively or positively
  - Based on building type, occupancy
  - Subsidies are being phased out, with some categories increasing more quickly

- **Post-FIRM (actuarial) rates**
  - Uses the structure’s elevation information to determine risk
  - Based on elevation difference between BFE (Base Flood Elevation) and lowest floor
  - For Post- and Pre-FIRM structures, if there is an elevation certificate

FEMA

RiskMAP
Increasing Resilience Together
A property owner’s insurance needs may change with the new zones.

The new FIRM may:

- Map a property into the SFHA for the first time
  - Their lender may require them to get an insurance policy

- Create a zone change on an already mapped-in property
  - Moving from an “A” zone to a “V” zone
  - Rating will change the next policy year

- Not affect a property or an insurance policy at all
Insurance Rates in Zone VE

- **Subsidized Rate Class**
  - Structures are likely already shown in the SFHA (zone A, AE, A1-30, AH, or AO) on the prior FIRM, and
  - In Standard Rated Policy
    - The rates may be somewhat higher than other rate classes and are receiving subsidy phase-out

- **Actuarial (Elevation Based) Rate Class**
  - Built after first FIRM or New construction in V zones
  - Rates are higher across the board based on obstructions: lattice work, horizontal member, enclosures, etc.
  - Built correctly without obstruction can be less costly
New Construction in Post-FIRM VE Zone

- Don’t expect, or predict, “affordable” flood insurance to be available for new construction in Zone VE
- Hold design professionals and construction contractors to the highest standard in Zone VE
- Avoid it if possible
Insurance Rating and Product Possibilities

- Grandfathering (Standard)
  - Keeps lower rate zone and/or BFE

- Two Ways
  - Continuous coverage (Pre & Post)
    - Coverage obtained prior and through a map change
  - Built-in-compliance
    - Post-FIRM ONLY
    - Built in compliance with the map at the time

- Newly Mapped Preferred Risk Policy
  - Must be Newly Mapped into SFHA from previous FIRM
  - Must have two or fewer losses from NFIP or disaster assistance
  - Bundled standard Preferred Risk Policy for the first year
  - Multiplier added after the first year
Insurance Rating and Product Possibilities

Grandfathering (Standard)

Exceptions
- Can’t have lapse in coverage
- Building can’t be altered/substantially improved

Newly Mapped Preferred Risk Policy

Exceptions
- Can’t be community’s first FIRM
- Multi-unit buildings insured under the RCBAP
- Policy is first purchased more than 12 months after the effective date of the FIRM
- Can’t have lapse in coverage
- Building can’t be altered/substantially improved
Resources for Insurance

Hazard Mitigation Assistance Program Overview

Ohio Emergency Management Agency Mitigation Branch
Ohio EMA Mitigation Branch

The mission of the Mitigation Branch is to integrate hazard mitigation principles in a variety of ways to make Ohio communities more sustainable and citizens more resilient in the face of future disaster events.

- Develop and maintain the SHMP
- Assist Ohio communities in local mitigation planning efforts
- Administer FEMAs Hazard Mitigation Assistance grant programs
- Chair the State Hazard Mitigation Team
Ohio is Disaster Prone!

OHIO PRESIDENTIAL DISASTER DECLARATIONS
(Includes all FEMA Major and Emergency Declarations from 1964 – 2013)
(Current as of March 17, 2017 – there have been no federal declarations since 2013)
What is Hazard Mitigation?

- Any sustained action taken to reduce long-term risk to people and property from hazards and their effects.
  - Acquisition/demolition
  - Elevation
  - Storm water infrastructure
  - Flood insurance
  - Tornado safe rooms
  - Building, zoning and floodplain management codes
  - Wetland and riparian area protection
Current Local Hazard Mitigation Plan Status

- Foundation of mitigation
- Hazard Identification and Risk Assessment
- Identifies and evaluates mitigations actions
- Must be updated and approved by FEMA every 5 years
Unified Hazard Mitigation Assistance

- Pre-disaster mitigation grant programs:
  - Pre-Disaster Mitigation (PDM)
  - Flood Mitigation Assistance (FMA)
- Post-disaster mitigation grant:
  - Hazard Mitigation Grant Program (HMGP)
Each program follows this basic process:

- Local governments apply for grants
- State governments assist locals, review grants, and submit applications to FEMA
- FEMA reviews grant applications and makes funding determinations; also provides technical assistance to states and locals
FEMA HMA Programs

- Cost effective
- EHP review
- 0 – 25% non-Federal cost share requirement
- Projects must be consistent with local and state mitigation plans
- Community must participate and be in good standing with NFIP
